Tino Weinkauff announced today, that the second beta version of TeXnicCenter 2.0 has been released. TeXnicCenter is a free open source LaTeX editor for Windows systems. This new version should be stable and can be used. There's a 32 bit version and a for 64 bit version.

Some of the changes:

- The spell checking is now based on the project language, see project settings.
- You can change the spelling language without a restart.
- Color schemes have been added to the editor. There are different factory settings, and you can use a customized scheme.
- Incremental search is now case-insensitive.
- The structure parser now recognizes include*.
